

Food Industry

The food & beverage industry is a busy environment where quick and easy access to hot water is required, preferably with a minimum of energy and water waste. Elwa provides a simple and durable solution with a range of energy and water efficient water heaters that meet those requirements.

Hotrun

Weighing less than 2kg the Hotrun is an electric instantaneous water heater the size of a small shoebox. With a Hotrun, Elwa offers an endless supply of hot water with the selected flow rates suitable for a wide range of applications such as hand wash basins, showers, laundries, kitchens, and many others.

The Elwa Hotrun can be installed in new buildings and are also a great solution to replace existing inefficient storage heaters.

The Hotrun is maintenance-free, has a strong construction and can be fitted in any position. The Hotruns are approved to all the relevant European, Australian and New Zealand electrical & plumbing standards.

Savings and benefits

The Hotrun is extremely water and energy efficient. Upon demand, only the required amount of water is heated and when installed close to the tap, water loss is reduced to a minimum. Energy consumption has been monitored and compared to traditional storage heaters, saving over 60% in energy consumption.

Our experience in the food and beverage industry shows a considerable reduction on installation costs of Hot Water Services by using the Elwa Hotrun. For personal hygiene applications there is the Hotrun-T range which is approved to the AU/NZ Plumbing Standards and is available limited to a maximum outlet temperature of 40, 45 or 50°C. All Hotruns are available in a range from 3.5 to 9.0 kW for single and dual-phase supply.
